

SPARK DESIGN LAW

Type, shape, ink, layout — and the homepage exceptions

Drop this file into any agent or hand it to any designer. It is complete on its own and needs no other context. Everything in it was measured from the live SparkMyName workspace, not invented.

Field	Value
Version	2026-07-27_2221
Issued	27 July 2026 at 10:21 PM Eastern
Supersedes	All previous SparkMyName type, font and style rules.
Owner	Peter Klein, VORREX IGNITE LLC
Applies to	Every page of sparkmyname.com and the workspace. No exceptions except those named in Part 2.

Why this exists. Before this law the workspace carried 62 different font sizes, 25 corner radii and 38 colors. It now carries 7, 5 and a disciplined palette. The result reads cleanly, scales predictably, and can be applied by anyone without taste being negotiated line by line.

Accessible edition. Black and white only. Body 16pt, tables 15pt, code 13pt.

PART 1 — The Design Law

This governs every surface: the workspace, every page, every email template, every document. Part 2 lists the only permitted exceptions.

1.1 Type — seven steps, nothing between

Base 16px, 1.25 ratio. Typeface: **Inter**, with system fallbacks.

Token	Size	Weight	Used for
--t-meta	13px	600–800	Labels, captions, quiet metadata. Never body copy.
--t-body	16px	400–600	All reading text. The floor. Nothing a customer reads is smaller.
--t-lead	20px	500–800	Section leads, tile titles, pull quotes.
--t-head	25px	800–900	Panel and section headings.
--t-title	31px	900	Page titles.
--t-display	39px	900	Hero name, small screens.
--t-hero	49px	900	Hero name, full size.

Fluid type is allowed, but must be anchored to the scale. Both ends of every clamp() must be tokens:

```
font-size: clamp(var(--t-display), 5vw + 1rem, var(--t-hero));
```

Never a raw size outside these seven. Line height: 1.65 for body, 1.1–1.2 for headings. Letter spacing: -.025em on headings, 0 on

body.

1.2 Shape — five radii

Token	Radius	Used for
--r-sm	8px	Chips, accent rules, inner rows.
--r-md	12px	Buttons, tiles, inputs.
--r-lg	18px	Cards and panels.
--r-xl	26px	Large containers.
--r-full	999px	Pills and round controls.

1.3 Ink — three steps, and reading text is solid white

Token	Value	Used for	Contrast
--ink1	#FFFFFF	Everything a customer reads.	15.9 : 1
--ink2	#B9CBE8	Supporting text, quiet metadata.	9.7 : 1
--ink3	#8399BD	Group labels read once, not clicked.	5.5 : 1

Contrast measured against the panel surface. All three pass WCAG AA comfortably. **No shades between these three.** Four competing near-whites were the single most common defect in the old system.

Do not dim body text to make something else stand out. An active or selected state already has a background, a weight change and an accent to distinguish it. Dimming its siblings is a fourth signal doing a job three others already do, and it costs readability on everything else.

1.4 Surfaces

Token	Value	Used for
--bg	#0A1428	Page background.
--panel	#102143	Panels, cards, the outer container.
--panel2	#0D1B38	Tiles sitting inside a card.

Token	Value	Used for
--line	rgba(160,190,255,.18)	Every hairline and border.

1.5 Accents

Purpose	Value
Buttons and primary actions	linear-gradient(92deg, #7C5CFF, #FF4D8D) — white text, --r-full
Accent rule and gradient headlines	linear-gradient(92deg, #21D4FD, #7C5CFF 55%, #FF4D8D)
Success	#3BE88F
Warning	#FFB020
Negative	#FF7B93

1.6 The card recipe

Every card and tile on every surface uses this exact combination. Consistency here is what makes the whole product feel like one thing.

```
background:    #0D1B38;  
border:        1px solid rgba(160,190,255,.18);  
border-radius: 18px;  
box-shadow:    0 24px 48px -36px rgba(124,92,255,.45);
```

1.7 The section heading signature

This detail appears beneath every section heading across the product. It is the visual signature that ties unrelated pages together.

```
/* the heading */  
font-size: 13px; font-weight: 800;  
letter-spacing: .16em; text-transform: uppercase;  
color: var(--ink3);  
  
/* the rule beneath it */  
content: ""; width: 34px; height: 2px;  
border-radius: 8px;  
background: linear-gradient(92deg,#21D4FD,#7C5CFF 55%,#FF4D8D);
```

1.8 Layout

Rule	Value
Container	max-width 1200px; margin 0 auto; padding 0 1.5rem
Section padding	4rem 0 on mobile, 6rem 0 from 768px up

Rule	Value
Media queries	Mobile first. @media(min-width:768px) then (min-width:1024px)
Touch targets	Minimum 48px × 48px on every button, pill and icon
Inputs	font-size 16px minimum — below this, Safari zooms the page on tap
Body line height	1.65
Text measure	60–75 characters per line for paragraphs

1.9 Grids — never CSS columns

This one is a bug, not a preference. CSS multi-columns will split a tall card in half across the column boundary, and `break-inside:avoid` cannot prevent it when the card is taller than the column. This shipped to production and sliced a logo section down the middle.

```
display: grid;  
grid-template-columns: repeat(auto-fill, minmax(330px, 1fr));  
gap: 18px;  
align-items: stretch;
```

align-items:stretch matters. With it, every card in a row shares the row height, so rows read as even bands. Without it (`align-items:start`) each card keeps its natural height and short cards leave ragged holes beneath them.

Sections carrying rows of content should span two columns so they can breathe. A six-row list squeezed into the same 330px as a single avatar reads as crammed while its neighbour reads as empty.

1.10 The hard rules

- **US spelling.** Color, never the British form, anywhere a customer reads.
- **Reading text is solid white.** No pale-blue body copy.
- **Nothing hidden behind a menu** that could be shown in the open.

- **Modals are a last resort.** A panel that blocks the page fights someone who needs to see the page. Open tools in the column, not over it.
- **Every button goes somewhere real.** No control that only shows a confirmation and does nothing.
- [™] **everywhere the SparkMyName wordmark appears.** ® **nowhere** until a registration certificate actually issues.
- **One primary action per view.** If everything is emphasised, nothing is. (The homepage is the single exception — see Part 2.)
- **Fix CSS at the source.** Check which rule actually *wins* the cascade before adding another override. Three competing definitions of one selector once made two rounds of fixes do nothing at all.

1.11 Ready to paste

The complete variable set. Paste into :root and everything above resolves.

```
:root{
  --t-meta:13px; --t-body:16px; --t-lead:20px; --t-head:25px;
  --t-title:31px; --t-display:39px; --t-hero:49px;

  --ink1:#FFFFFF; --ink2:#B9CBE8; --ink3:#8399BD;

  --bg:#0A1428; --panel:#102143; --panel2:#0D1B38;
  --line:rgba(160,190,255,.18);

  --cyan:#21D4FD; --violet:#7C5CFF; --pink:#FF4D8D;
  --amber:#FFB020; --ok:#3BE88F; --no:#FF7B93;

  --r-sm:8px; --r-md:12px; --r-lg:18px;
  --r-xl:26px; --r-full:999px;

  --grad:linear-gradient(92deg,var(--violet),var(--pink));
  --tri:linear-gradient(92deg,var(--cyan),var(--violet) 55%,var(--pink));
  --elev:0 24px 48px -36px rgba(124,92,255,.45);
}
```

PART 2 — The Homepage Law

A homepage is a conversion page, not an application screen. Four rules from Part 1 bend. These are the **only** permitted exceptions, and they apply to the homepage and marketing pages — never inside the workspace.

2.1 The four exceptions

#	Exception	Rule
1	Type goes bigger	Add ONE token, used only on the marketing hero: <code>--t-mega: clamp(var(--t-display), 5vw + 1rem, 64px)</code> . Everything else on the page stays on the seven steps.
2	Repeat the same CTA	A homepage repeats ONE primary action 3–4 times down the page — hero, after the comparison, after what is included, and the final block. Same words, same style, every time. That is one action repeated, not four competing ones. One secondary CTA in the hero only.
3	More air	Sections 5rem mobile and 8rem desktop, instead of 4/6. Paragraph measure 60ch, hero headline measure 18ch. One idea per section.
4	Alternate surfaces	Sections alternate between <code>--bg</code> and <code>--panel2</code> , divided by a 1px <code>--line</code> top and bottom. This gives the eye a resting beat instead of one long scroll.

2.2 Above the fold — where the page is won

Nielsen Norman eye-tracking: users spend **57% of page-viewing time above the fold**, and 74% of that in the first two screenfuls.

Baymard: trust signals above the fold lift conversion by **up to 35%**.

The hero must answer three questions in five seconds:

- What problem does this solve?
- What is the product?
- Who is it for?

The hero contains exactly five things. Nothing more:

- Headline — 6 to 10 words maximum
- Sub-headline — one sentence, 25 words maximum
- One primary CTA
- One secondary CTA
- A visual showing the **real product**, not an illustration

Plus a trust line **directly beneath the CTA**, not three scrolls down.

The most common failure is cramming several messages, competing visuals and multiple CTAs into that one space.

2.3 Page order — mirror the visitor's checklist

#	Section	The question it answers
1	Hero	What do I get?
2	Proof	Who else uses this? Trust, numbers, names.

#	Section	The question it answers
3	The problem	Do they understand my situation? Name the pain before selling.
4	How it works	How does it work? Three steps maximum.
5	What you get	What exactly arrives? Specific and countable, in cards.
6	Comparison	Why not the alternative? Stacked vertically, not side by side.
7	Social proof	Is this real? Specific beats generic every time.
8	Price	What does it cost? Handle the commitment.
9	Final CTA	The same action as the hero.
10	Footer	Legal, disclaimers, owner line.

2.4 Copy formulas — pick one, do not mix

Formula	Structure	Best for
PAS	Problem → Agitate (make the cost concrete) → Solution	When the visitor already feels the pain.
BAB	Before (their world now) → After (their world fixed) → Bridge (us)	When the transformation is the story.

Show the transformation, not the feature list. Screenwriting, not a spec sheet. A homepage that describes capabilities loses to one that describes a changed life.

2.5 Speed is a design decision

A 6.4-second load will strangle a good product regardless of how it looks.

- Hero image under **500KB**, with a separate mobile version under **200KB**
- Explicit width and height on every image — stops layout shift
- `loading="lazy"` below the fold, `fetchpriority="high"` on the hero
- **No video in the hero.** A still or a short interactive beats a video file.
- Nothing blocking the first paint

2.6 Mobile

Over 60% of traffic. Check every page at **380px wide**.

- Two-column heroes collapse to one column with the headline **and** CTA still visible without scrolling. Never let the CTA fall below the fold on a phone.
- 48px minimum touch targets
- 16px minimum on inputs, or Safari zooms the page
- Nothing scrolling sideways, nothing clipped

PART 3 — Truth

No exception for marketing. These apply to every page, every email and every document. A beautiful page that overclaims is worse than a plain one that does not.

3.1 What must be said correctly

Never say	Say instead	Why
Verified available handles	Suggested handles	Nothing probes any platform. Direct probing breaks platform terms.
19 premium business names	Six curated names	Six is what is delivered — and it is the stronger claim.
5 logo styles per name	Three concepts, five files	Three concepts are generated; five files are delivered.
A 2K photo for every name	Seven cinematic photographs	One order header plus one per name. All seven belong to the customer.
\$25	\$99	Outdated on an old sheet.
Professional website	Website starter files	Spark does not build or host customer websites.
We handle legal and banking	Hand-picked tools at each step	The Success Path points to vetted partners. It is not a service performed.

Never say	Say instead	Why
Complete automated business infrastructure	Your complete brand, ready to launch	The original is vague and overclaims.

Every count on a page must be one the code actually enforces. If it is not enforced, do not state it.

3.2 Required legal position

Item	Exact position
Trademark	SparkMyName is a trademark application pending , Serial No. 50014040, Class 042. It is not registered. Owned by VORREX IGNITE LLC. Use TM . Never [®] .
Patent	U.S. Patent Pending, App. 19/704,386. Owned by Peter Klein personally — not by either LLC. Never conflate the two in a footer or a claim.
Clearance	SparkMyName does not perform trademark clearance.
Websites	SparkMyName does not build or host customer websites.
Handles	Social handles are recommended, not verified. Confirm availability on each platform before claiming one.

3.3 The self-check before shipping any page

#	Check
1	Can a stranger say what this is in ten seconds?
2	Is the headline ten words or fewer?
3	Is there a trust signal above the fold?
4	Is the CTA above the fold on a 380px phone?
5	Does every claim survive the truth table in 3.1?
6	Does every button go somewhere real?

#	Check
7	One idea per section, with air around it?
8	Any type size or radius outside the tokens?
9	Hero under 500KB, nothing blocking first paint?
10	™ present, ® absent?

Issued 27 July 2026 at 10:21 PM Eastern. Version 2026-07-27_2221.

This document supersedes all previous SparkMyName type, font and style rules. Every value was measured from the live workspace. Contrast ratios were calculated, not estimated. Owned by Peter Klein, VORREX IGNITE LLC.
