

SPARKMYNAME

Session handoff — read this first

Written so the next session can start work in five minutes instead of five hours. Every figure was read from the working disc, not recalled.

Field	Value
Prepared	27 July 2026 at 23:03 UTC
Owner	Peter Klein, Managing Member, VORREX IGNITE LLC
Product	SparkMyName™ — one sentence in, a complete brand out. \$99 one time.
Deploy	app.netlify.com/projects/sparkmyname/deloys — Founder deploys each disc
Working copy	/home/claude/site · discs to /mnt/user-data/outputs/
Disc naming	"Spark (what changed) Month Day Year, HHMM.zip"
Session output	49 discs shipped on 27 July 2026

Accessible edition. Black and white only. Body 16pt, tables 15pt.

1. Start here — the five-minute version

If you read nothing else, read this page.

The system

- **The workspace is one file.** `js/workspace-core.js`, 5,878 lines. It renders the whole Command Center. Do not split it into pages.
- **162 Netlify functions** in `netlify/functions/`. 42 root pages. 9 law documents in `docs/`.
- **Everything is dark by default.** 45 feature switches. A department can be fully built and simply switched off. See section 7.

The three rules that matter most

- **Small batches.** One coherent change, tested, shipped, Founder verifies. A large unverified batch broke live checkout once and forced a rollback.
- **Run the suites before every disc.** 20 of them, in `tools/tests/`. If one goes red, find out why before shipping.
- **No claim may exceed what the code does.** Counts are enforced or not stated. Handles are *suggested*, never verified. Spark does not clear trademarks and does not build or host customer websites.

How the Founder works

- Voice dictation — read for intent, not literal wording.
- ADA accommodations: **one small step per message**, naming the exact window, button and location, then wait.
- Cannot right-click. Use Control+Click.
- Always give direct clickable URLs.
- “q” prefix on a message means question only, take no action.

2. What changed on 27 July 2026

49 discs. Grouped by what they actually accomplished.

The workspace was rebuilt around a design system

Area	Before	Now
Type	62 different font sizes	7 tokens. 16px floor on anything a customer reads.
Shape	25 corner radii	5 tokens.
Ink	38 colors, four near-whites	3 ink steps. Reading text is solid white.
Left rail	12 flat items, 13px pale text, 236px wide	Three labelled groups, 16px white text, 268px wide, gradient spine on the active item.
Brand card	Controls in a row plus two hidden menus	A Control Deck: 12 visible tiles in 3 groups. No menus.
Card sections	Column layout that sliced tall sections in half	Grid. Wide sections span two columns. Nothing splits.
AI tools	Opened in a 1120px modal over a dimmed page	Open full width in the right column. Rail stays visible.

Real bugs found and fixed

Bug	Cause	Fix
All 8 AI tools "failed to fetch"	Server returned an error on the FIRST provider instead of falling through, so tiers two and three never ran. Last tier called retired gemini-1.5-flash. Client aborted at 9s and hid the reason.	Chain falls through. Model updated. 26s ceiling. Real errors shown on screen.
Photos looked aged and inconsistent	The art library banks ONE photo per industry and reuses it forever. Photos banked during the July-17 vintage era were still being served. A library hit never calls the model, so no prompt fix could reach them.	Library versioned to library/v2/. Old shelf orphaned. Self-healing regenerates old orders when opened.
Logos lost quality	A photo clean-up banned preview models EVERYWHERE, silently dropping logo work from the Pro model to Flash.	Ban is now photo-specific. Logos opt in with allowPreview:true.
"Download everything" gave all 6 names	downloadAll looped every name and never read curName, while Share correctly used the active name.	Scoped to the active name. All-six survives as its own labelled tile.

Bug	Cause	Fix
Brand kit named the wrong business	Kit was titled from the order and personalised with names[0] regardless of which name you downloaded.	Names the brand actually being packaged.
Missing brand photos in the grid	One unbounded query; Supabase caps at 1000 rows. 247 brands = ~1,480 rows, so a third were dropped at random.	Batched in 100s with explicit limits. Same bug fixed twice in neighbouring code.
Deck and tabs vanished from the card	Lifting the action row left an orphan <code></div></code> , closing <code>.card</code> early and throwing everything after it outside.	Orphan removed. A structural balance suite now guards this.
"Copy link" lied	<code>navigator.clipboard.writeText</code> returns a <code>PROMISE</code> ; a rejection sailed past <code>try/catch</code> and it said "Copied." anyway.	Promise honoured, real fallback, only claims success when it succeeded.

Things retired on purpose

- **Live chat.** Six customer-facing promises of a "live agent" removed. Nobody staffs a live chat. It now says a real person replies by email, which is true.
- **The Tools and More menus.** Their contents are visible tiles now.
- **mailto: for Spark's own mail.** It handed messages to whatever mail app the device had — often none on a phone. Everything routes through Resend.
- **The white logo plate** on the brand card. It showed the logo file's own baked-in whitespace, so the mark looked marooned. The brand name leads instead.

Built new

- **Public brand card** —
`netlify/functions/brand-card.js`. A shareable page per name with real Open Graph tags so a pasted link unfurls properly. Exposes four fields only: name, tagline, domain, photo.
- **Self-healing artwork** —
`netlify/functions/refresh-art.js`. Detects stale library photos on open and re-runs the art department.
- **Brand Kit PDF in the download.** `genCopyDeck` already existed since 24 July but only the catalogue called it, so the ZIP shipped a bare `.txt`. Now included.
- **Image Law + machine guard** —
`docs/SPARK_IMAGE_LAW.md` and

tools/image-law-check.js.

- **Two concept homepages** in /july27/.

3. How it is wired

The paths you will need most often.

The money path

`index.html → checkout.html → create-checkout.js → Stripe`

index.html has no backend at all. No forms, no Supabase, no functions. Its only script is a redirect to `checkout.html`. Rebuilding the homepage is far safer than it sounds. `checkout.html` calls `create-checkout`, which is sealed: every checkout resolves to the one \$99 product regardless of what the page requested.

The build path

`payment webhook → deliver-background.js (up to 15 min)`
→ `clean-names.js` (the ONLY naming engine)
→ `art-department-background.js` (photos)
→ `logo-concepts.js / logo-concepts-background.js`
(marks)
→ email via Resend

The workspace path

`workspace.html + js/workspace-core.js`
`my-reports.js` → the brands list (batched in 100s)
`ai-assist.js` → all 8 AI tools, via `window.smnLLM`
`support-request.js` → concierge, support, billing,
founder – all Resend
`email-brand.js` → "Email it to me", brand sheet PDF,
designer handoff

order-request.js → custom asset requests
add-names.js → "More names"
olin-handoff.js → hand it to a designer
brand-card.js → the public share page
refresh-art.js → self-healing photos

The image engine

studio-engine.js is the single entry point. PHOTO_LADDER is the house tier list. Callers must not pass their own geminiModels for photographs.

Work	Models	Rule
Photographs	gemini-3.1-flash-image → gemini-2.5-flash-image → OpenAI	Preview models BARRED. A set drawn by different models disagrees with itself.
Logos / identity	gemini-3-pro-image-preview first, then flash tiers	Preview REQUIRED — Pro is the better draughtsman. Opt in with allowPreview:true.

4. The design law

Set in the workspace on 27 July. **This is what gets applied to every page next.** Full copy lives in docs/SPARK_DESIGN_LAW.md.

Type — seven steps, 1.25 ratio

Token	Size	Used for
--t-meta	13px	Labels, captions, quiet metadata. Never body copy.
--t-body	16px	All reading text. The floor.
--t-lead	20px	Section leads, tile titles.
--t-head	25px	Panel headings.
--t-title	31px	Page titles.
--t-display	39px	Brand name, small screens.
--t-hero	49px	Brand name, full size.

Shape — five radii

Token	Radius	Used for
--r-sm	8px	Chips, rules, inner rows.
--r-md	12px	Buttons, tiles, inputs.
--r-lg	18px	Cards and panels.

Token	Radius	Used for
--r-xl	26px	Large containers.
--r-full	999px	Pills and round controls.

Ink — three steps only

Token	Value	Rule	Contrast
--ink1	#FFFFFF	Everything a customer reads. Solid white.	15.9:1
--ink2	#B9CBE8	Supporting text and quiet metadata.	9.7:1
--ink3	#8399BD	Group labels you read once, not things you click.	5.5:1

Surfaces and accents

Purpose	Value
Page background	#0A1428
Panel / card	#102143
Tile inside a card	#0D1B38
Hairline	rgba(160,190,255,.18)
Action gradient	linear-gradient(92deg, #7C5CFF, #FF4D8D) — white text

Purpose	Value
Tri gradient (rules, accents)	#21D4FD → #7C5CFF 55% → #FF4D8D
Semantic	success #3BE88F warning #FFB020 negative #FF7B93

Standing design rules

- **US spelling.** Color, never the British form, anywhere a customer reads.
- **Solid white for reading text.** No pale-blue body copy.
- **Nothing hidden behind a menu** that could be shown in the open.
- **Modals are a last resort.** A panel that blocks the page fights a person who needs to see the page. Tools open in the column, not over it.
- **Every button goes somewhere real.** No control that only shows a confirmation.
- **™ everywhere the wordmark appears. ® nowhere** until a registration certificate actually issues.
- **Minimum 48×48 touch targets.** Inputs at 16px so Safari will not zoom.
- **Fluid type must be anchored to the scale.** clamp() is fine; its ends must be tokens.

Concept folder rule

All concept work goes in /july27/, never the site root. The root is the live deploying site and a concept beside index.html is one wrong click from going live. Nothing in the folder is linked, sitemapped, or shipped to a customer. View by deploying and opening the URL by name. When approved, a concept moves to the root as its own small tested batch — never by copying the folder

across.

5. How to test before shipping a disc

20 suites live in `tools/tests/`. They exist because every one of them caught something real.

```
cd /home/claude/site
for t in tools/tests/*_test.js; do node "$t" | tail -1;
done
node tools/image-law-check.js
node -c js/workspace-core.js
for f in netlify/functions/*.js; do node -c "$f"; done
```

What each guards

Suite	Guards
structure	Div balance across six render functions. Added after an orphan tag closed the card early and hid the deck.
wired	All 12 deck tiles: rendered, bound, and the target actually exists.
deck / grid / onebar	The Control Deck, the open grid, the action bar.
rail / nav / panels	The rail groups, routing, and in-page panels.
photo / logo	The image ladder, preview-model policy, ageing language, library version.
heal	Self-healing artwork and the staleness rule.
share	The public brand card: privacy, escaping, hostile input.

Suite	Guards
resend	No Spark mail leaves by mailto.
kit / polish / aitools	Brand kit contents, card balance, the AI tools.
brands	The brands grid batching and progressive render.

A stale assertion is not a bug. Several suites went red today because the code changed shape, not because it broke. Read the failure, prove the code is right, then update the assertion — and say so out loud rather than quietly editing it.

6. What is still open

Honest list. Nothing here is a rebuild.

Known faults

Item	What is known	Next step
Designer page: "failed to fetch"	The payload the workspace sends was verified correct, so the fault is downstream — the function or its environment.	Read the Netlify function log for olin-handoff.
Guide, Concierge, Help layouts	Still on older sizing and spacing; not yet brought onto the design system.	Apply the tokens, same as the account panels.
Generic filler in thin kits	When a brand yields fewer than six taglines or bios, a fallback pads with generic lines ("Quality you can count on").	Founder decision. Three real taglines may beat six half-hollow ones.
Stage switcher images	All four stages on the concept homepage share one image.	Four distinct images.
checkout.html and ?idea=	The concept homepage passes the sentence in the URL; checkout does not read it.	One line in checkout.html when the concept is promoted.

Founder to-do outside the code

- **Check the Netlify switches read literally "on".** The values true, 1 and yes all FAIL SILENTLY. Check SMN_ART_DEPT, SMN_LOGO_DEPT, SMN_ASSEMBLY at minimum.
- **Ear-check one existing film.** The narration model alias rolled forward automatically; per-brand voice casting is locked, so confirm one film still sounds right.
- **USPTO TSDR check** around late October 2026 to avoid abandonment.
- **Decide on the concept homepages** in /july27/ — story-home.html and home-hybrid.html.

External deadlines

Date	What	Impact
23 Oct 2026	gpt-image-1 shuts down	Last-resort tier only. An env override already exists (OPENAI_IMAGE_MODEL) so migration is one word. Do it early.
24 Sep 2026	OpenAI video tooling shuts down	No impact. Spark uses no AI video model. Films are Ken Burns scenes plus narration.
Already gone	gpt-4o-search-preview	Sat in an orphaned harness. Repointed.
Already rolled	TTS snapshot	Alias rolled forward. No code change needed.

The truth pass, before go-live

Places where marketing still says more than the code does.

Says now	Should say
Verified available handles	Suggested handles. Nothing probes any platform.
19 premium business names	Six curated names.
5 logo styles per name	Three concepts, five files.

Says now	Should say
A 2K photo for every name	Seven cinematic photographs.
\$25	\$99.
Professional website	Website starter files.
We handle legal and banking	Hand-picked tools at each step.
Complete automated business infrastructure	Your complete brand, ready to launch.

7. Things a new session must not do

Each of these has already cost real time or real quality. They are written down so they are not rediscovered.

Architecture

- **Do not split the workspace into multiple pages.** It is one 5,878-line file and it works. Splitting it means rebuilding every fix in this document.
- **clean-names.js is the ONLY naming engine.** The old four-file graveyard (generate-names, category-dna, name-intel, category-identity-guard) is rollback only. Never edit it, never re-enable it, never point anything at it. If the words cove, ember, haven, Granite or Sterling appear, something re-pointed to the old engine — find the pointer, never "fix" the old words.
- **Never rebuild** `library/{key}.png`. That is the vintage photo shelf. The current shelf is `library/v2/`.

The mistakes I made today, so they are not repeated

- **Do not generalise a narrow ban.** Banning preview models everywhere to fix a photo problem silently destroyed logo quality. The photo ban is photo-specific by design.
- **Do not replace a region without checking what else is in it.** Building the Control Deck, a replacement swallowed the tab strip and all four panels. The suites caught it before it shipped.

- **An orphan closing tag is invisible and fatal.** Lifting an element without its closing tag closed .card early and threw the deck, tabs, panels and mosaic outside it. Run the structure suite.
- **Check which CSS rule actually wins.** Three competing definitions of the same rail selector existed; the last silently won, so two rounds of "fixes" did nothing. Fix at source, do not layer another override.
- **Do not trust a confident sentence in a document.** The previous system document said the AI failover meant "nothing ever breaks." It was broken.

Truth

- Never claim handles are verified. Never imply trademark clearance. Never say Spark builds or hosts customer websites. Never use ®. Never state a count the code does not enforce.

8. Where things live

Path	What it is
js/workspace-core.js	The whole Command Center. 5,878 lines.
workspace.html	The workspace shell and all its CSS. Build stamp at the foot of the rail.
index.html	Marketing homepage. No backend. Redirects to checkout.html.
checkout.html	The idea box and payment. Calls create-checkout.
netlify/functions/	162 functions.
docs/SPARK_DESIGN_LAW.md	Colors, type, shape.
docs/SPARK_IMAGE_LAW.md	Retired image paths. Machine-enforced.
docs/SPARK_LOGO_LAW.md	The eight-mark law for logos.
docs/SPARK TYPOGRAPHY_LAW.md	Type rules.
tools/tests/	All 20 suites plus the rail audit.
tools/image-law-check.js	Fails the build if a retired image path returns.
july27/	Concept folder. Not live. README explains the rule.

Path	What it is
july27/story-home.html	Concept homepage — the simple story version.
july27/home-hybrid.html	Concept homepage — voice input + DREAM/PLAN/START/GROW.
july27/design-system.html	The type, shape and ink specification as a page.

Protected, never merge into a build

DETECTIVE_ONLY_july15, DETECTIVE_ONLY_july04_vault, DETECTIVE_lavish, and SPARK BACKUP/ are read-only reference.

9. How to open the next session

Paste this at the top of a new conversation, attach the current disc and this PDF, and work can begin immediately.

I am Peter Klein, sole founder of SparkMyName (VORREX IGNITE LLC).

Attached: the current working disc and the session handoff PDF.

Read the handoff first – sections 1, 4 and 7 especially.

How I work: voice dictation, so read for intent. ADA – one small step per

message, name the exact window and button, then wait. I cannot right-click.

Always give clickable URLs. "q" prefix means question only, no action.

Working copy at /home/claude/site. Discs to /mnt/user-data/outputs/ named

"Spark (what changed) Month Day Year, HHMM.zip". I deploy at

app.netlify.com/projects/sparkmyname/deloys

Before every disc: run all suites in tools/tests/, run tools/image-law-check.js, and syntax-check the JS. Never ship with a red suite unexplained.

Small batches only. Concepts go in /july27/, never the root.

Today I want to work on: _____

What good help looks like here

- **Verify, do not assume.** Read the figure out of the code before stating it.
- **Say what went wrong plainly** when something breaks, including your own mistakes. The Founder can tell a Pro logo from a Flash one at a glance and will notice.
- **Do not claim completeness you have not earned.** "I fixed the outage; I did not get to the Guide layout" is worth more than a confident summary.
- **Push back when a request would break a standing law** — then do the part that is safe and say what sat out, in one line, without ceremony.

Legal position	Statement
Trademark	SparkMyName is a trademark application pending , Serial No. 50014040, Class 042. Not registered. Owned by VORREX IGNITE LLC. Use [™] , never [®] .
Patent	U.S. Patent Pending, App. 19/704,386. Owned by Peter Klein personally , not by either LLC. Do not conflate the two.

Legal position	Statement
Disclaimers	SparkMyName does not perform trademark clearance and does not build or host customer websites. Social handles are suggested, not verified.

Prepared 27 July 2026 at 23:03 UTC from the working disc.
